

### Description

Powered by solar energy with the largest solar caption surface, the Wireless Room Sensor performs temperature and humidity measurements and broadcasts the results using the EnOcean wireless standard. The Wireless Room Sensor can also broadcast the setpoint and the change of state of the two buttons. The Wireless Room Sensor also features an optional battery backup and an energy collector model for room sensors installed in areas with little or no natural light.

### Applications

- EnOcean compatible building automation systems
- Installations requiring virtually no maintenance and easy installation
- Installations where wiring can be difficult (concrete or other)

### Features

- Solar powered or 24Vac input
- Large solar cell surface
- Energy harvesting provides operation for up to 14 days without light
- Energy harvesting functions down to 200 lux
- Optional backup battery for low light installations.
- EnOcean wireless communication (new generation)
- Frequency: 902MHz
- Saves time and labour (easy installation)
- Configurable wake-up intervals
- Configurable redundant transmissions
- Built-in temperature sensor and optional humidity sensor
- Remote temperature sensor input
- Optional setpoint dial with 2 buttons for configurable peripheral applications
- Energy collector model for room sensors installed in areas with little or no natural light also available.

### Models

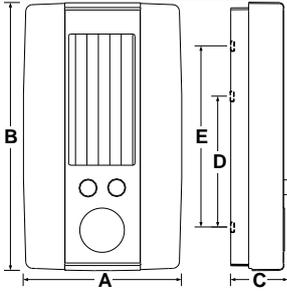

Model	Temperature sensor	Humidity sensor	Setpoint dial & 2 buttons	Energy collector	EnOcean profile number	Frequency
STS29E9	■	-	■	-	A5-10-05	902 MHz
STR29E9	■	-	-	-	A5-02-05	902 MHz
SHS29E9	■	■	■	-	A5-10-10	902 MHz
SHR29E9	■	■	-	-	A5-04-01	902 MHz
CSV29	-	-	-	■	-	-

Note: The enclosed device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference.
- This device must accept any interference received, including interference that may cause undesired operation.

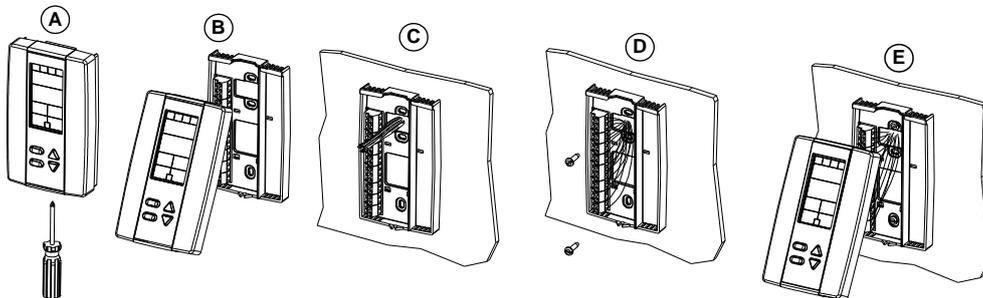

### Technical Specifications

Technical Data	Wireless Room Sensor
Power Supply	<ul style="list-style-type: none"> <li>- Solar cells and super capacitors</li> <li>- Optional 2032 backup battery</li> <li>- Optional 24Vac input</li> <li>- Optional Energy Collector (CSV29)</li> </ul>
EnOcean Integrated	EnOcean integrated module = 902.87 MHz (STM300U)
	Antenna = Integrated (Whip Antenna)
Temperature Sensor	RF range = 300m (985ft) free of obstacles – 30m (100ft) interior
	10KΩ Thermistor, Type III (internal/external)
	Operating temperature range = 0°C to 40°C [32°F to 122°F]
	Internal sensor precision = +/- 0.2°C [0.4°F]
	External temperature sensor selectable by jumper
Humidity Sensor	The linearization of the sensor will be done by the application firmware
	Integrated CMOS humidity sensor
Setpoint	Humidity sensor precision = +/- 2% RH (from 20% to 80% RH); +/- 3% RH entire range
	Setpoint potentiometer range = 10°C to 30°C [50°F to 86°F]. Represented by 0-255 user configurable.
EnOcean Custom Application	Measurement of the temperature and linearization of the sensor output (Thermistor sensor).
	Manage communications and get the measurement of the integrated humidity sensor for product configuration when humidity measurement is requested.
	Get the setpoint level if this configuration is requested.
Dimensions	 <p>           A = 2.85" (73mm)            B = 4.85" (123mm)            C = 1.00" (24mm)            D = 2.36" (60mm)            E = 3.27" (83mm)         </p>

### Mounting Instructions

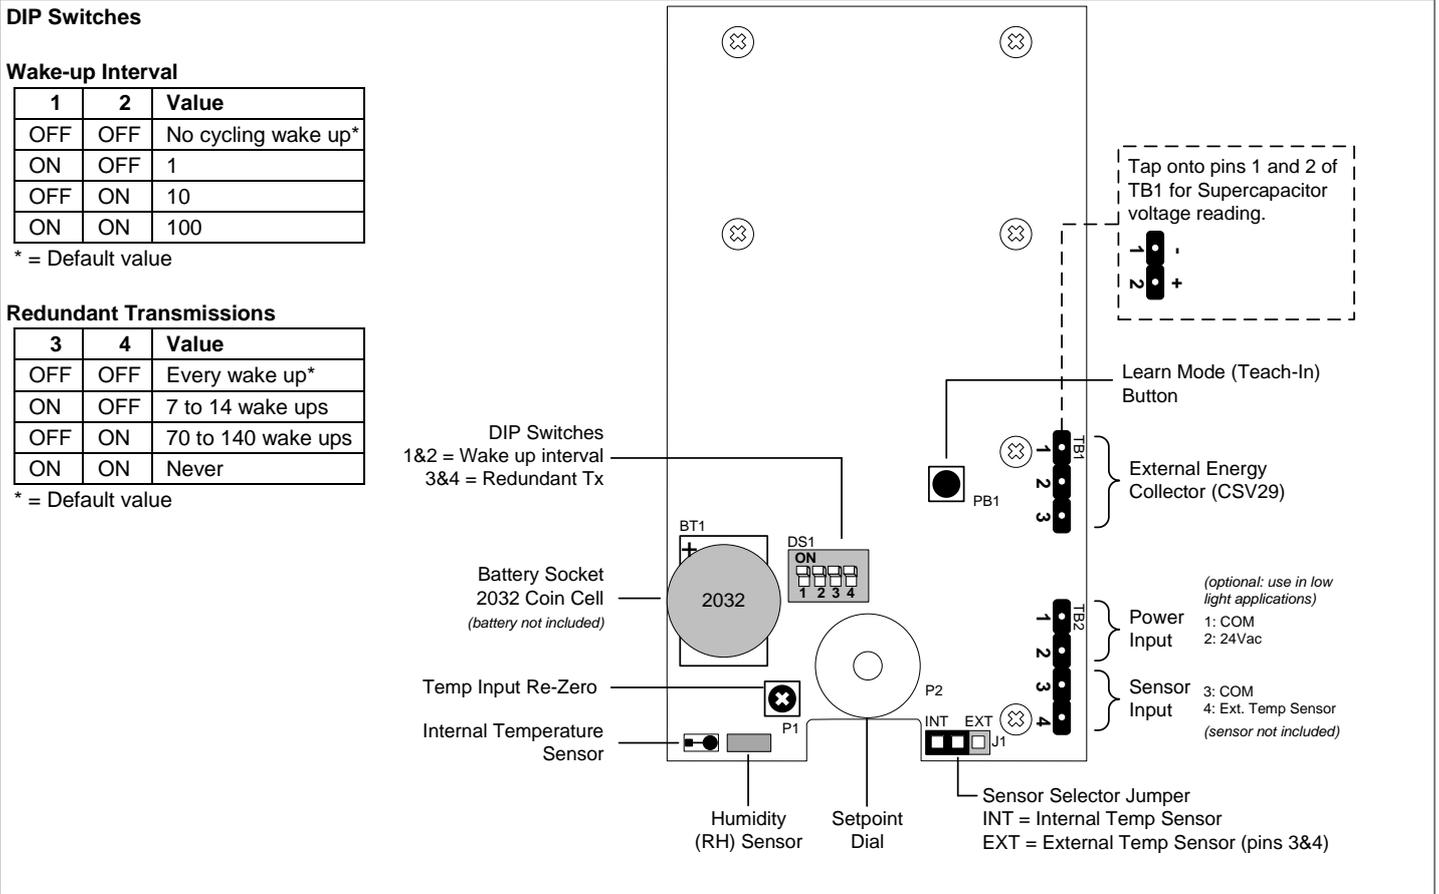

**⚠ CAUTION: Remove power to avoid a risk of malfunction.**

- A. Remove the captive screw that's holding the base and the front cover of the unit together.
- B. Lift the front cover of the unit to separate it from the base.
- C. Pull all wires through the holes in the base.
- D. Secure the base to the wall using wall anchors and screws (supplied). Make the appropriate connections.
- E. Mount the control module on the base and secure using the screw.

PCB

**WARNING:** Risk of non compliance to FCC standard. For FCC compliant installations do not use the 1-second wake-up interval setting. As per FCC15.231, devices shall be provided with a means for automatically limiting operation so that the duration of each transmission shall not be greater than one second and the silent period between transmissions shall be at least 30 times the duration of the transmission but in no case less than 10 seconds.
